

ISMAR 2021 T1

Interoperability and Standards Tutorial

Christine Perey, Neil Trevett,
Muriel Deschanel, Bill Bernstein

ISMAR 2021
OCTOBER 4-8 BARI - ITALY

IEEE
COMPUTER
SOCIETY

IEEE
Advancing Technology
for Humanity

Agenda

Pacific Time	Topic (and Format)	Speakers/Participants
:00 to 0:10	Introductions	All
0:10 to 1:10	What is the problem? Why is interoperability important for AR Adoption? How do we create tools to address AR interoperability obstacles?	Christine Perey Muriel Deschanel Neil Trevett
1:10 to 1:25	Current Status of Standards for AR Interoperability – what’s in the interoperability toolbox already?	Christine Perey
1:30 to 2:00	How to use standards as tools	Bill Bernstein
2:00 to 2:30	Panel Discussion	Bill, Christine, Muriel and Neil

Tutorial Chairs/Speakers

Neil Trevett,
NVIDIA/Khronos
Group

Christine Perey,
PEREY Research &
Consulting

Muriel Deschanel,
B<>Com/ETSI

William Bernstein
Air Force Research
Laboratory, Digital
Manufacturing/Future
Factory Interest Area

What is the problem? Why is interoperability important for AR Adoption?

500+ Companies in the Current AR Ecosystem

AR Ecosystem Stakeholders

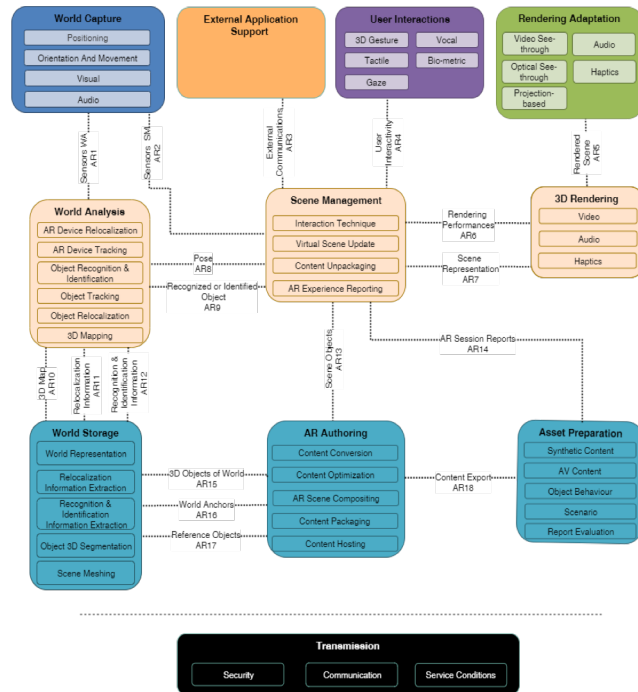

What is AR Interoperability?

AR interoperability is the ability for **AR components, systems and software** applications to **communicate and exchange data** and, as a result, **for users** to be able to **visualize in context the information** that has been exchanged between systems of **different providers** **without translation, conversion or delays**

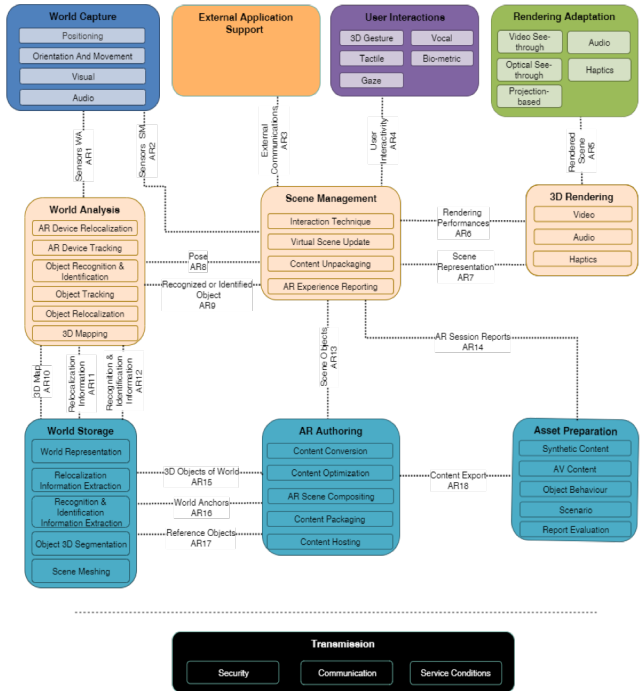

What is AR Interoperability?

AR Systems/Services

What is AR Interoperability?

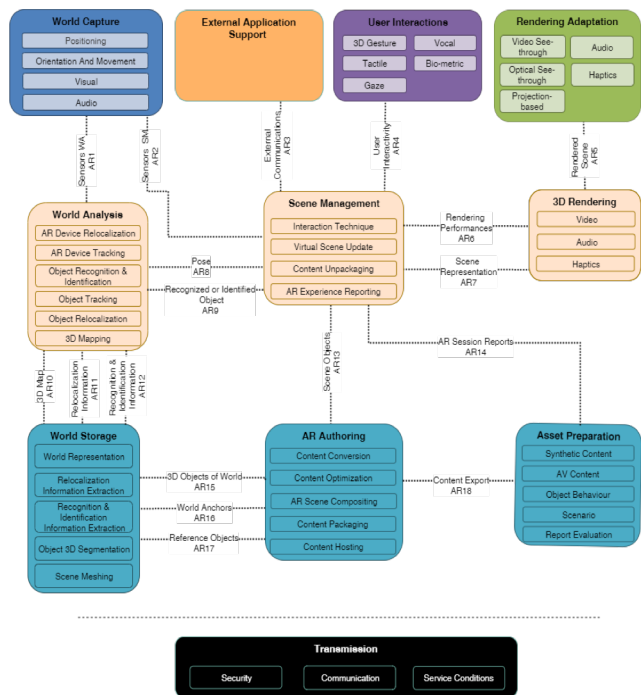

Multi-vendor

AR Systems/Services

What is AR Interoperability?

Multi-vendor

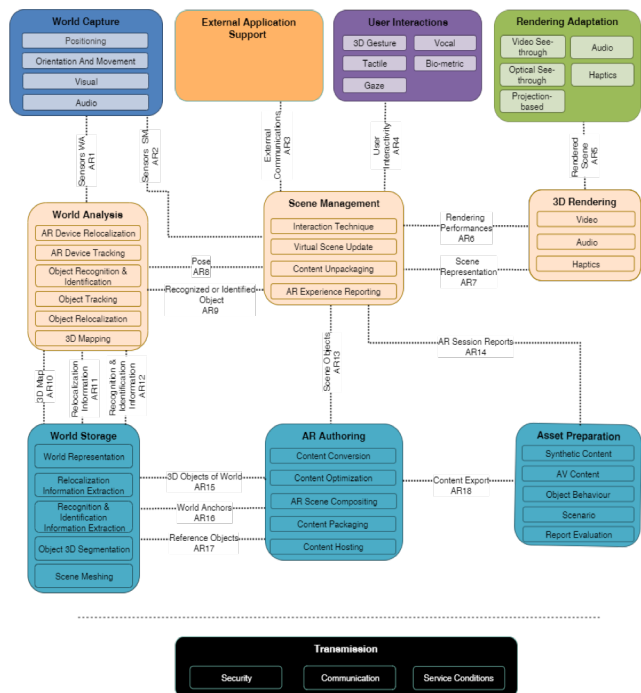

Wearable
Tablet
Projection

Many form factors
to meet the needs
of a wide variety
of use cases

AR Systems/Services

What is AR Interoperability?

Multi-vendor

Wearable
Tablet
Projection

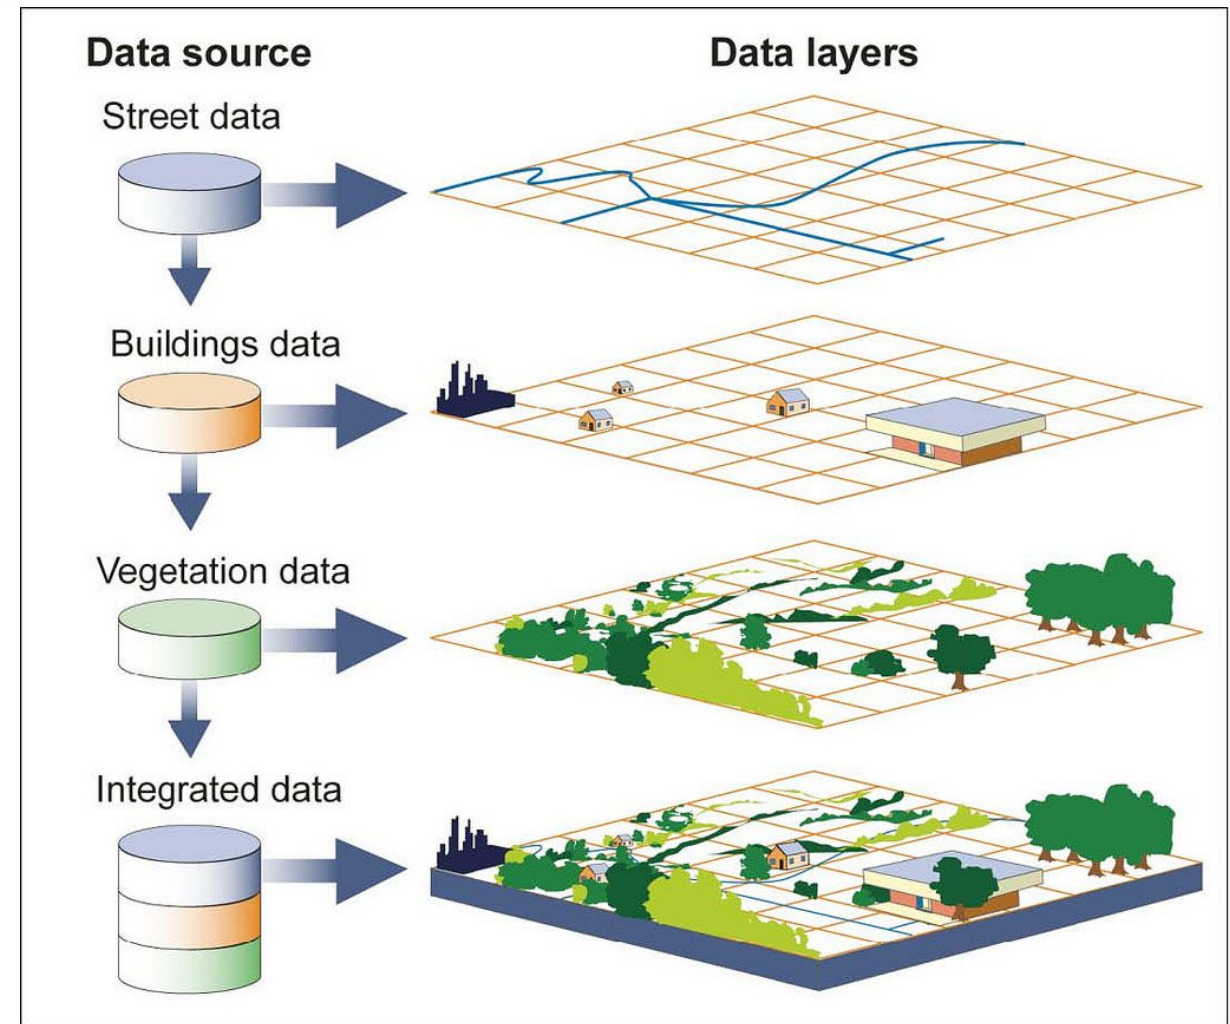

Wide variety of venues: Home, Work, Shopping, Museum

These venues have other users and technologies in them

AR Systems/Services

Data must play nicely together

- Data layers should all align and be provided to the user, as needed
- Some expectation about how the data behave must be met
 - For example, a query to a street address should return a location on a map

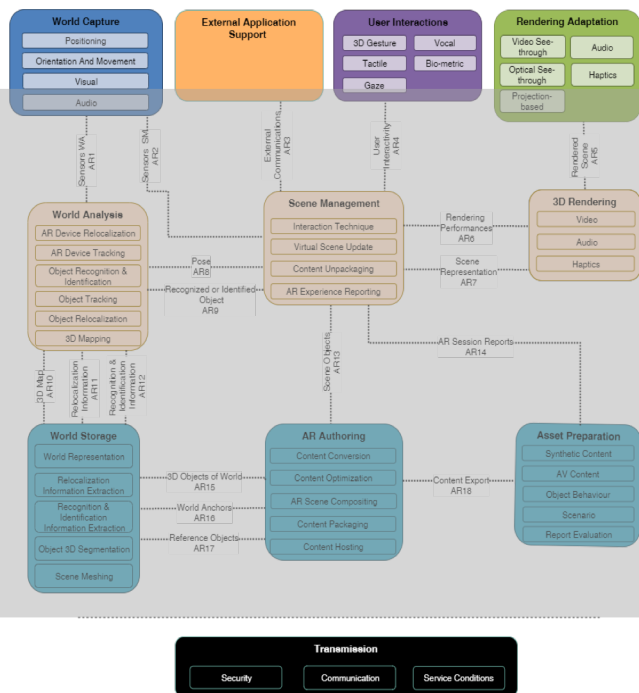

Source: GAO.

What AR Interoperability?

Multi-vendor

Wearable
Tablet

Interoperability Addresses Four Core Ecosystem Goals

Growing Markets
By reducing customer confusion and increasing capabilities and usability

Enabling Innovation

Customers can assemble unique solutions addressing their challenges

Providers can compete on implementation quality, performance, power etc. etc.

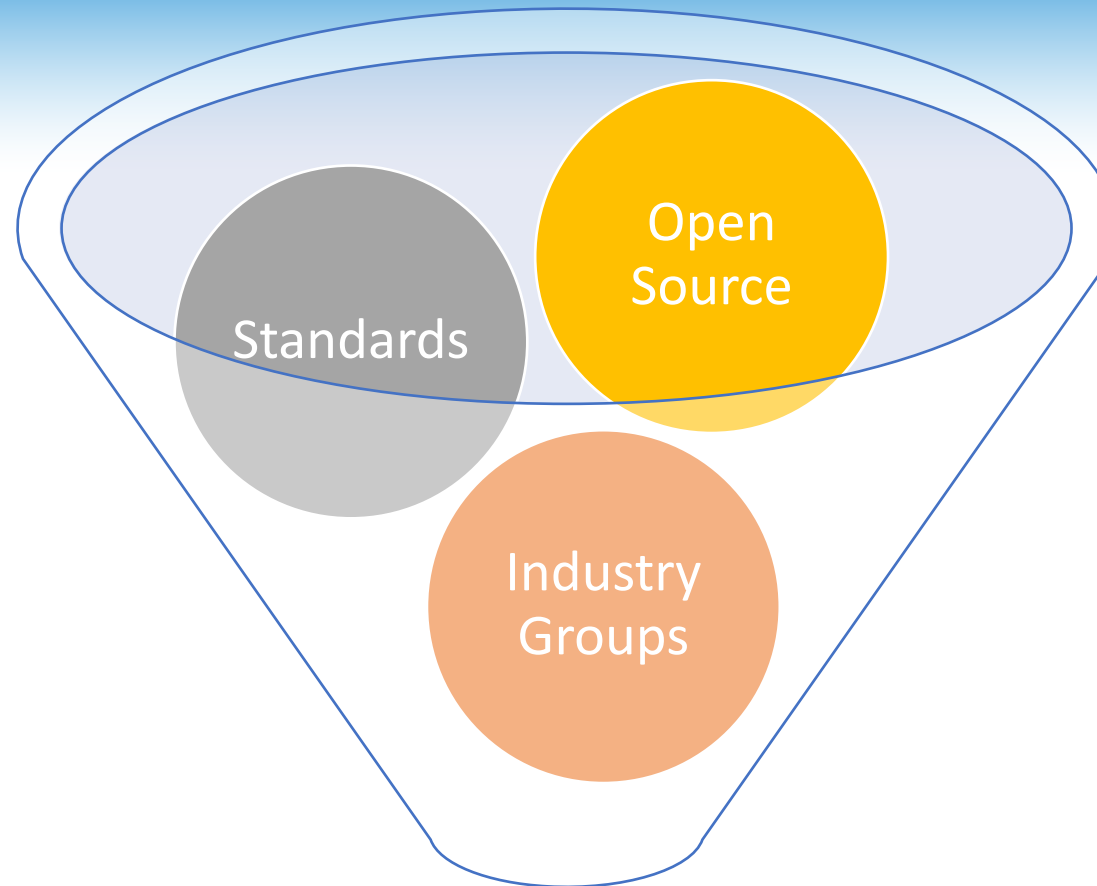

Accelerating Time to Market
With well-proven functionality, testing and interoperability

Reducing Costs
By sharing development between many companies and driving volume

Tools for AR Interoperability

Interoperability within and between
AR and other IT systems

Why are there so Many Options?

- Different SDOs, industry groups and communities have different expertise and participation levels
- Different groups have different IP protection and work styles
- Risks
 - Duplication of work
 - Standards from different standards organization do not interoperate
- Reducing risks
 - Mutual members
 - Liaison agreements
 - Sharing of information
 - Participation

SDOs Differ in How They Work

Closed

Involves inputs from only select group (members)

“in the Open”

Non-members allowed to observe/comment

Limited Participation

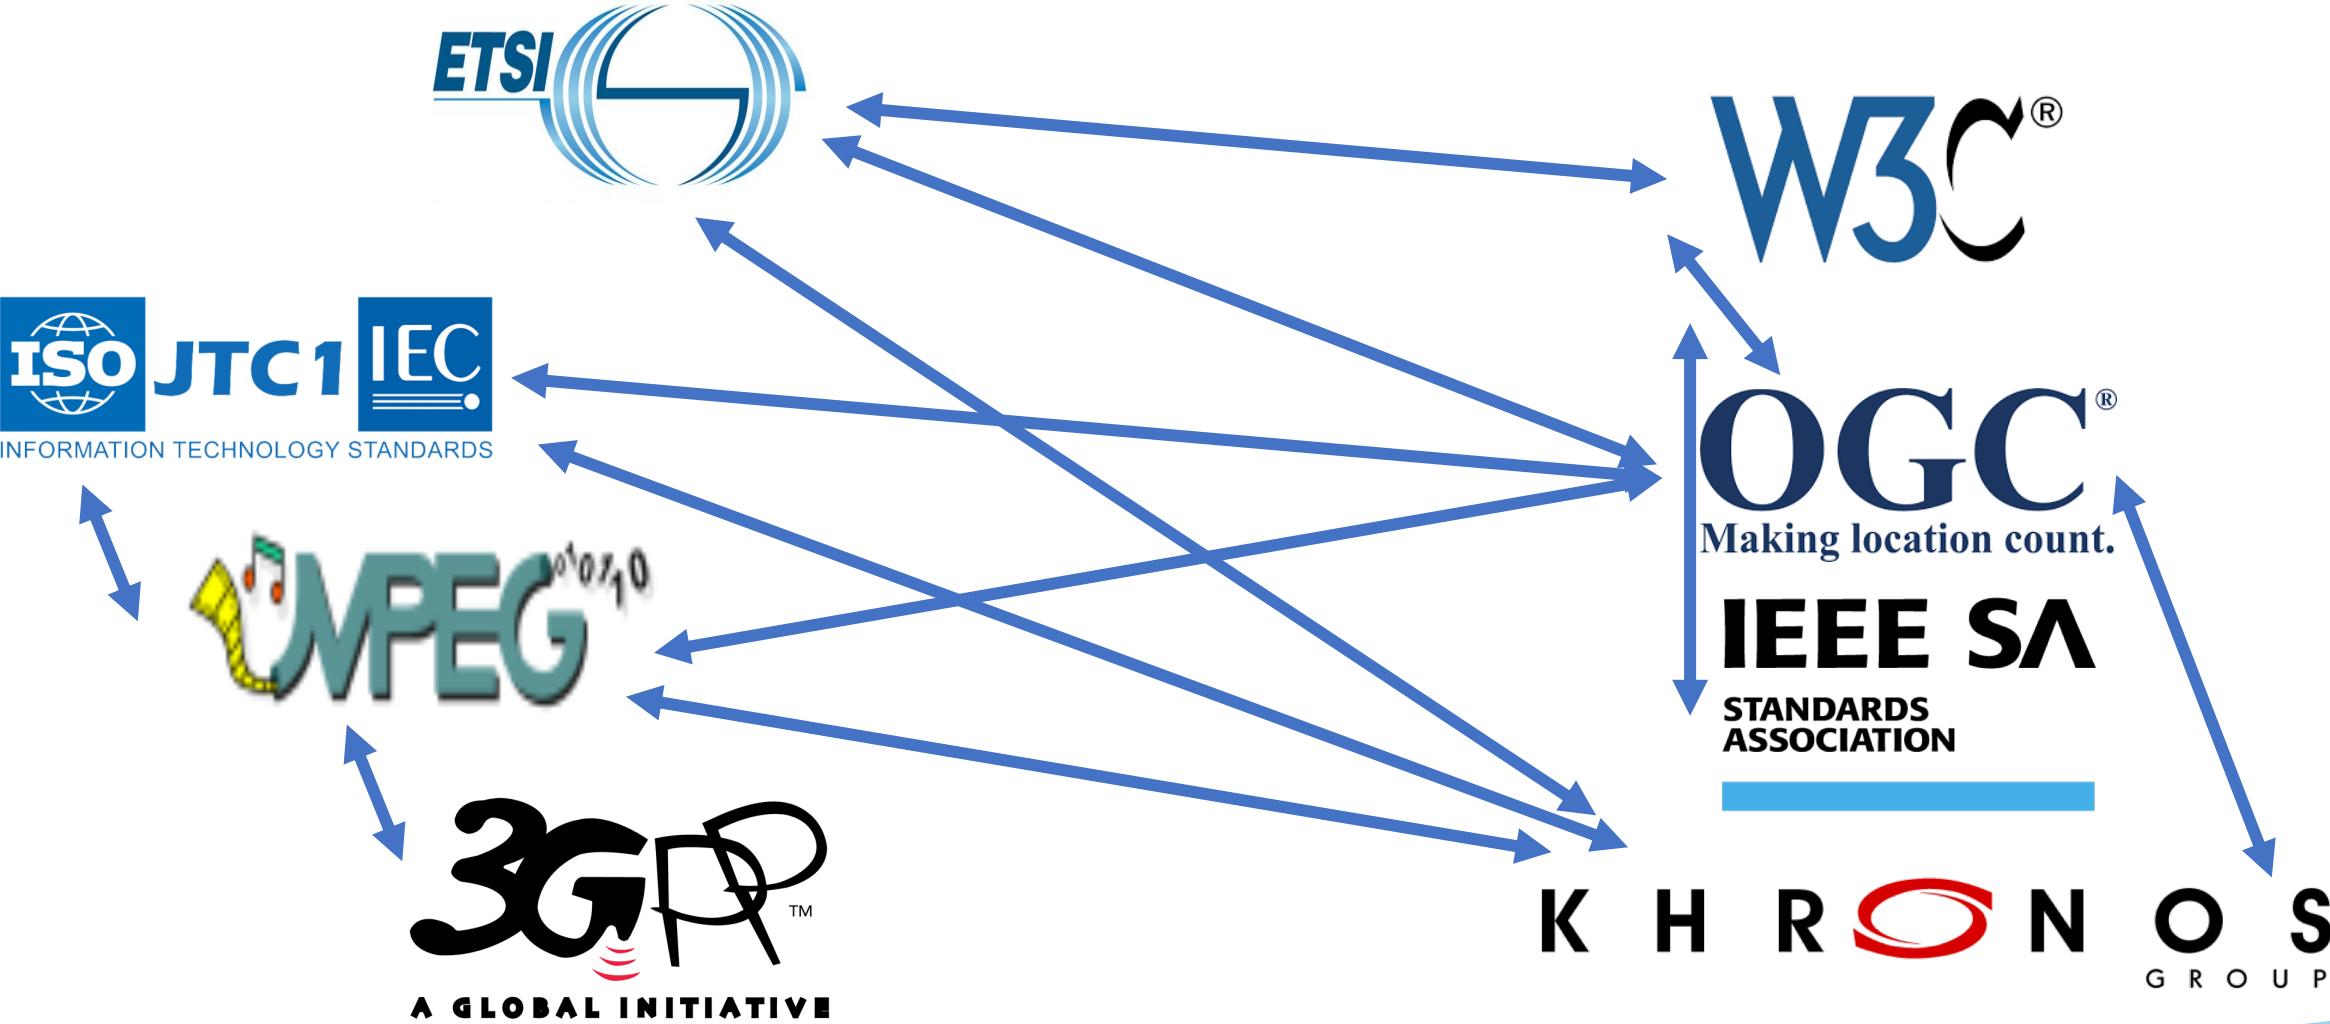

Invited experts can participate

Completely Public

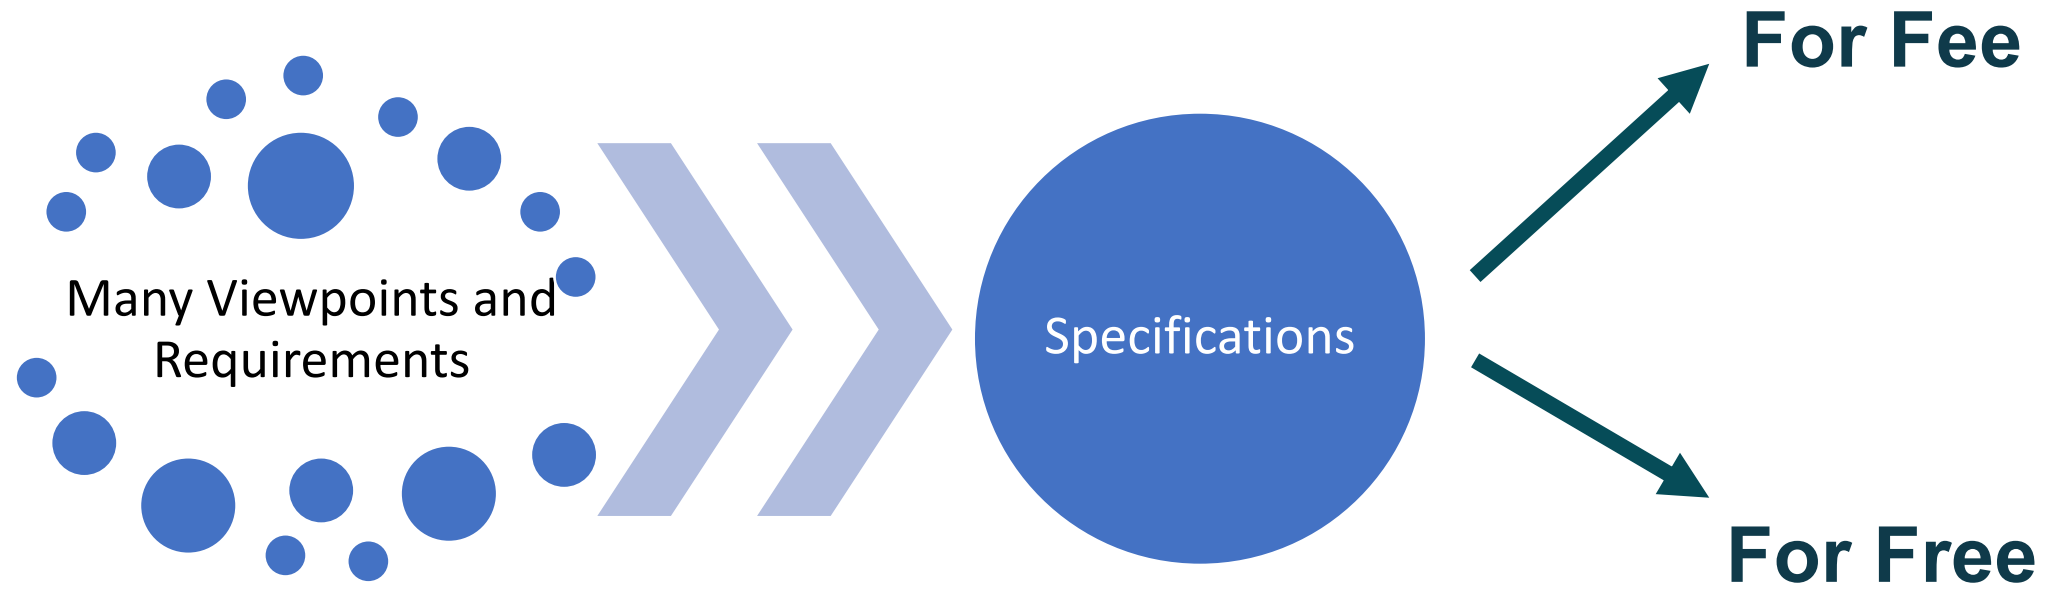

Non-members who agree to SDO terms allowed to contribute

Liaisons are Key to Lowering Risks

Consensus is Key
